

SAMPLING TO BEGIN AT THE FOLCROFT LANDFILL

The U.S. Environmental Protection Agency (EPA) signed an agreement with 14 Potentially Responsible Parties (PRPs) associated with the Lower Darby Creek Area Superfund Site in Delaware and Philadelphia Counties, Pennsylvania. Under the agreement, the PRPs will conduct a Remedial Investigation and Feasibility Study (RI/FS) at the Folcroft Landfill. The RI/FS will help determine the amount and extent of contamination present at the landfill and develop cleanup alternatives to address the conditions identified. Work is scheduled to begin the week of December 11, 2006 and will include installing groundwater monitoring wells and collecting groundwater, air and soil samples.

The Folcroft Landfill makes up just one part of the Lower Darby Creek Area Superfund Site; the Clearview Landfill is also being addressed. EPA is working on a separate RI/FS for the Clearview Landfill. Information regarding the RI/FS for Clearview, as well as information about the Folcroft RI/FS scope and schedule, will be shared with the public at public information sessions to be held in Winter 2007. Look for EPA's announcement of the date, time and location of the sessions in your local papers.
